

## **catoolRT 25.6 Release Notes**

Changes since 25.3:

- Improvements to +720/-720 degree support
- Improved IFile extended data support during import and export
- Option to calculate engine speed over one cycle rather than by tooth. This reduces DAQ load at high engine speeds for encoder measurements.
- Support high resolution icons in high DPI monitors and general better handling of high DPI
- Fix bug losing dialog settings whilst saving data
